

LIVE MORE. WASH LESS.™

EVERYONE HAS THEIR FAVORITES.

It might be a shirt, pair of shoes or gym bag. But because of frequent use — and, in some cases, infrequent laundering — those favorites are much more susceptible to developing a foul odour that renders them unwearable or unusable. Even those textiles that can be washed often retain a stench, because washing alone doesn't effectively neutralise odours that permanently build up in synthetic textiles.

Unfortunately, many of the odour-control technologies in the marketplace don't solve the problem. From inadequate efficacy to production limitations, manufacturers — and ultimately consumers — face compromises related to article life and cost. With Scentry Revive®, however, there are no compromises. The new, groundbreaking solution neutralises odours for up to five wears without washing for clothing and up to year without washing for footwear. Also ideal for infrequently washed products such as gear, gym bags, mattress pads and bedding, it fits seamlessly within the manufacturing process without the need for a binder and doesn't necessitate exorbitant pricing.

TYPICAL APPLICATIONS:

Activewear

Footwear

Home Textiles

Bedding

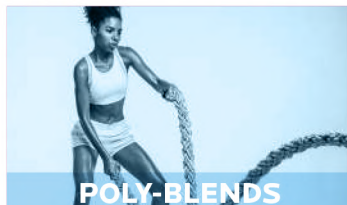

Uniforms

IDEAL FABRICS:

POLYESTER

POLY-BLENDS

CAPTURES AND ELIMINATES ODOURS.

When an item utilising the patent-pending technology is washed, Scentry Revive continues to neutralise odours for up to 50 home launderings. In essence, it provides protection for the entire functional life of any product that's been treated with it — shoes, apparel, utility bedding, gear and pretty much anything else made of polyester. So you can get on with your life, whether you're running a few miles or simply running a few errands, without worrying about lingering smells. The result is a product unlike anything else on the market — and you can smell the difference.

EFFECTIVE

Proven to neutralise odors for up to 50 washes.

CONVENIENT

Neutralises and absorbs odor continuously without washing for up to five wears.

AFFORDABLE

Delivers unparalleled effectiveness at an affordable price point.

UNIQUE

Patent-pending technology.

VERSATILE

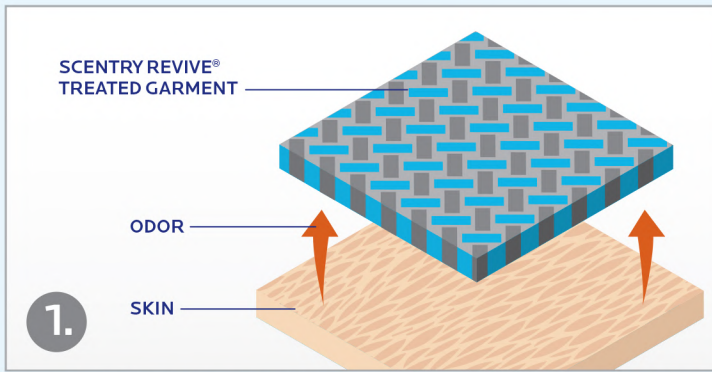

Works on a wide range of polyester fabrics.

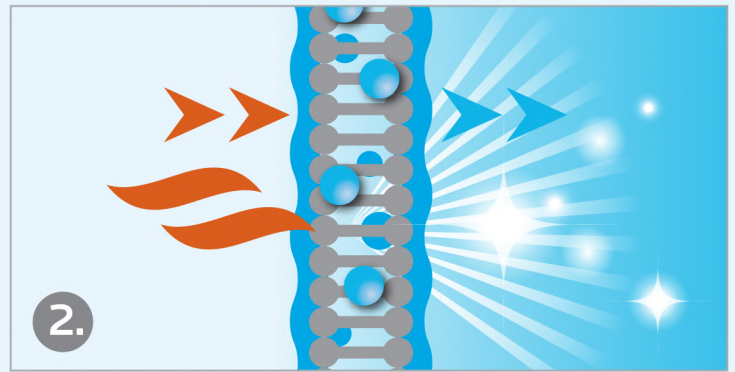

COMPATIBLE

Works with existing dyeing and finishing processes.

HOW IT WORKS?

THE SCENTRY REVIVE® TECHNOLOGY PERMEATES THE GARMENT TO FORM A PROTECTIVE BARRIER.

AS ODOR COMES IN CONTACT WITH THE SCENTRY REVIVE® BARRIER, IT NEUTRALIZES AND DISSIPATES.

ODOR IS ELIMINATED AS CONTACT IS MADE WITH THE SCENTRY REVIVE® BARRIER WEAR AFTER WEAR.

EVEN WITHOUT WASHING AFTER EACH USE, THE SCENTRY REVIVE® BARRIER PREVENTS ODOR AND ODOR BUILD-UP OVER THE LIFE OF THE FABRIC.

THE SCIENCE IS ONLY THE BEGINNING

Many variables go into producing consistent, high-quality and durable textiles, so we work closely with manufacturers to ensure that our odor control technologies only enhance apparel, footwear or other products. Microban's status as the global leader in odor control is due in part to the innovation, analytics and support that go into this process — and our solutions work properly and consistently because of it.

We're about more than innovative technologies, though. From pricing power and field technical service to marketing support and patent counsel, Microban supplies partners with thorough and advanced services to help deploy our odor-control products. And, as a global company, we have a presence everywhere brands manufacture. So when you're ready to differentiate your product and win a larger share of the market, contact us and we'll share how Scentry Revive® by Microban can help.

Contact us today to learn how Microban SCENTRY REVIVE® can differentiate your product and give you a more powerful presence in your market.
